- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

### 3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

### Other Site Characteristics

Lago situato in una piccola conca pensile di origine glaciale posta in sinistra orografica della bassa valle centrale. Apporto idrico diffuso proveniente dalle falde detritiche poste alla base delle pareti rocciose circostanti e occasionalmente da un canale irriguo; presenza di un piccolo emissario verso sud-est. Substrato roccioso costituito da micascisti e prasiniti del Complesso a calcescisti e pietre verdi della Zona Piemontese. La vegetazione circostante è caratterizzata da boschi di Pino silvestre e Roverella e da Castagneti da frutto. Sito molto frequentato durante il periodo estivo. L'habitat 6210 è prioritario perché caratterizzato da fioriture di orchidee.

### 4.2 Quality and importance

Unica stazione valdostana di *Nymphaea alba* L. subsp. *alba*. Interessante contrasto tra l'ambiente xerotermico della conca e l'ambiente umido dello stagno.
